

QWIK APP

Problem Statement

The Queue Problem at Ashesi

- Students wait 15-30 minutes during peak meal times
- No way to see what's available or how busy a cafeteria is
- No pre-ordering - students miss class, lunch breaks are cut short
- Cafeteria staff can't predict demand - food waste and shortages

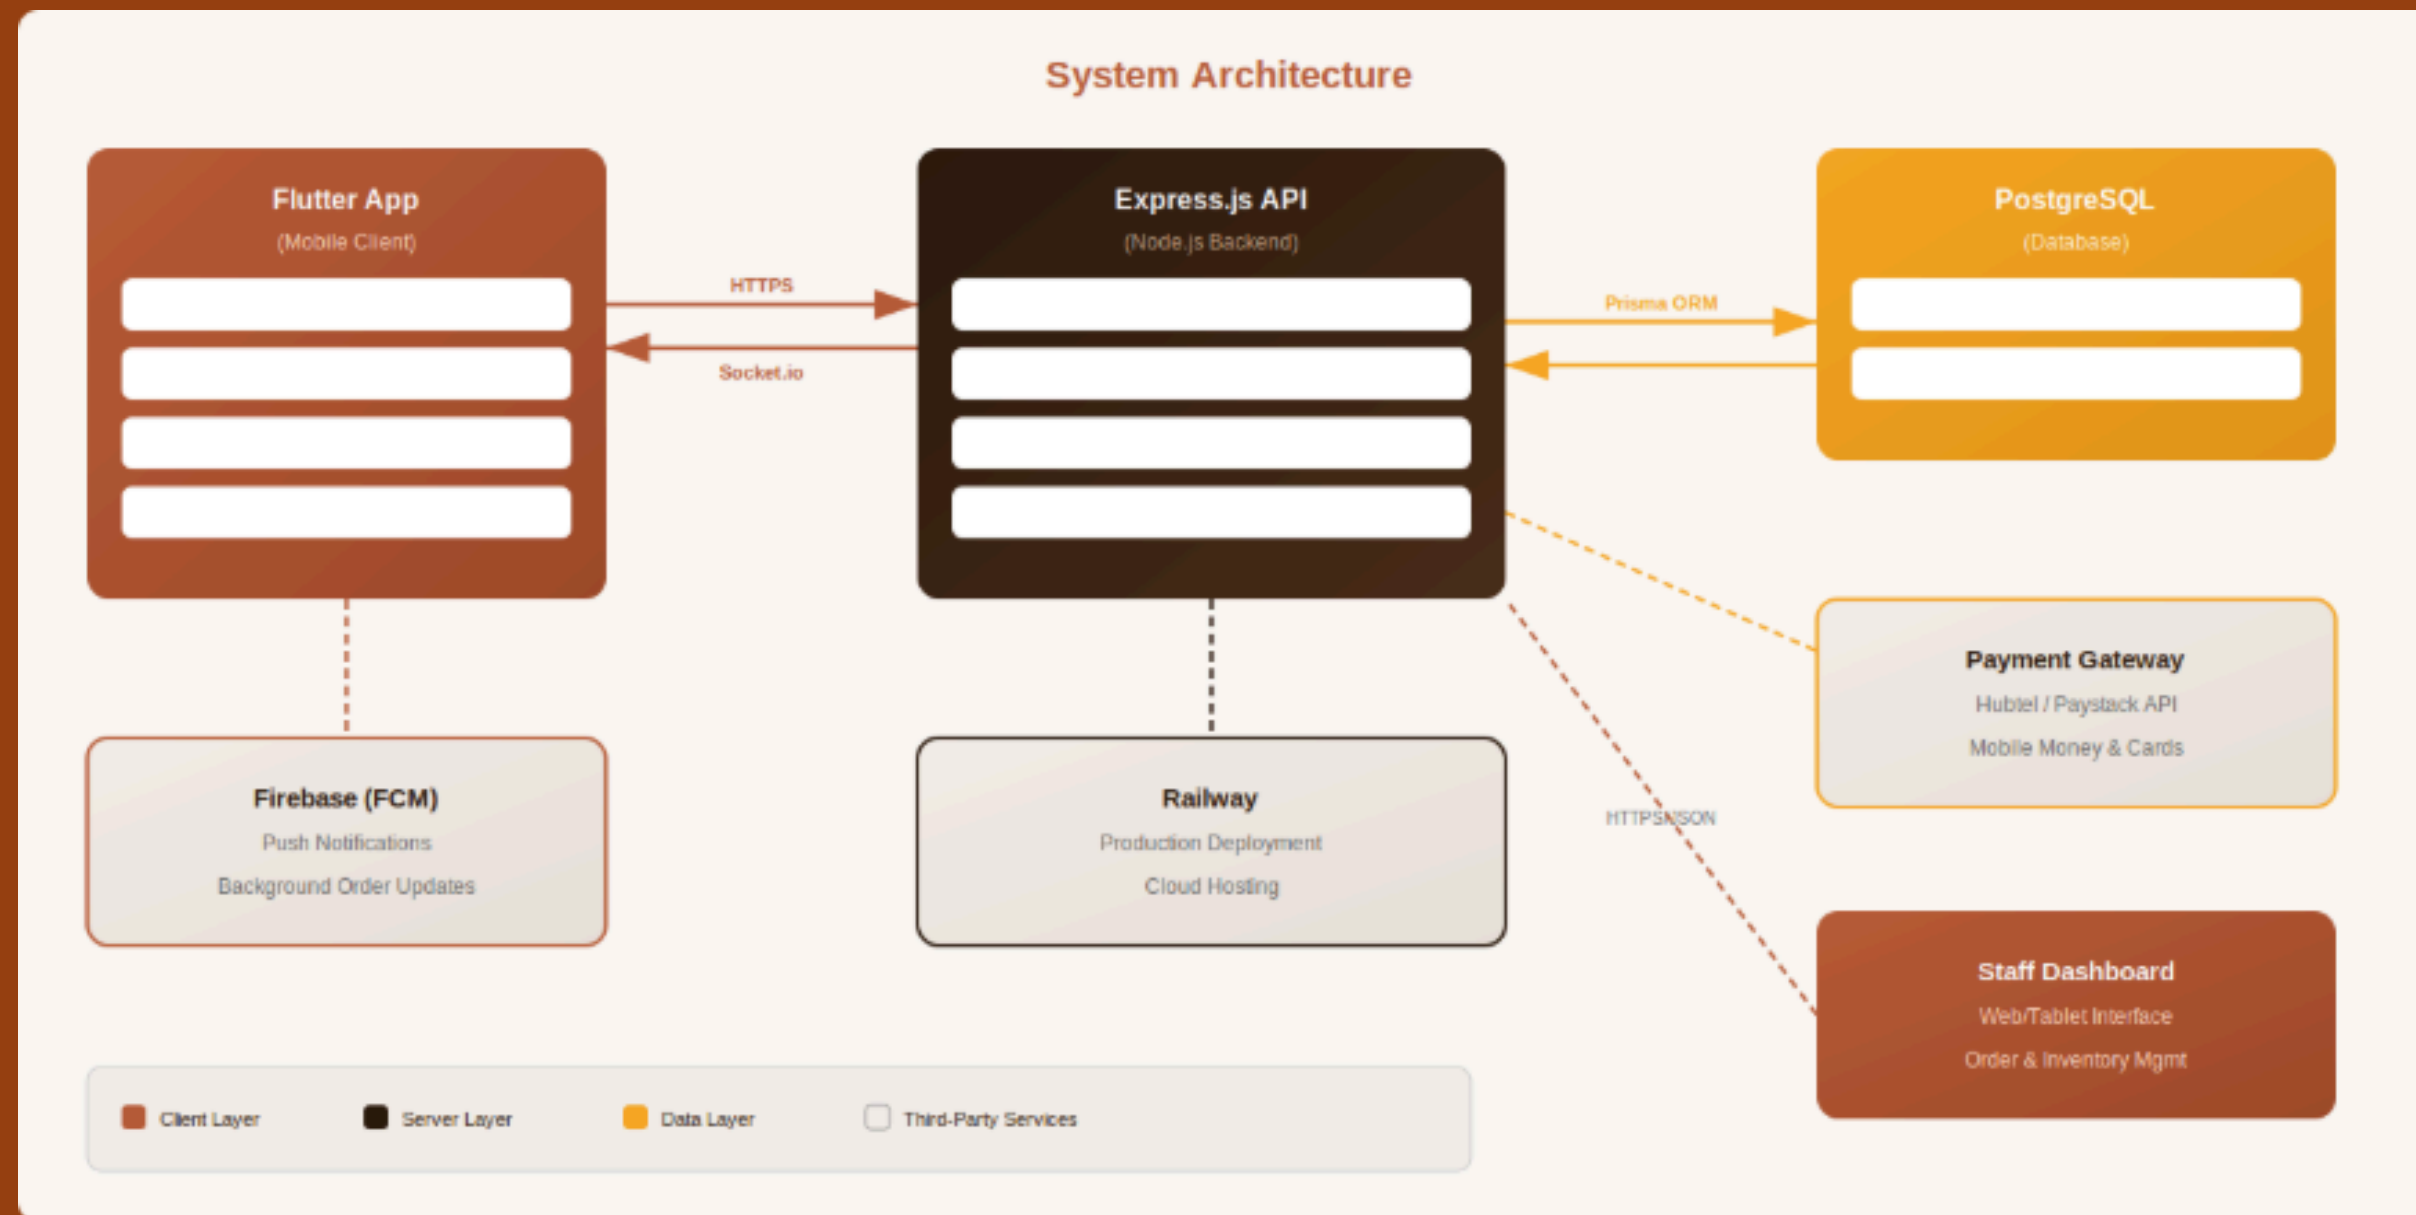

Proposed Solution

A mobile-first food pre-ordering platform built for the Ashesi community

- **Browse menus across Hallmark, Akornor, and Munchies**
- **Pre-order meals and select a pickup window**
- **Pay via Mobile Money, Meal Plan, or cash on pickup**
- **Track order status**

ARCHITECTURE

Implementation

- **Frontend: Flutter app (Android, iOS, macOS) + Staff tablet dashboard**
- **Backend: Node.js / Express.js API with PostgreSQL database**
- **Real-time: Socket.io for live order updates**
- **Payments: Hubtel / Paystack (MoMo + Card)**
- **Notifications: Firebase Cloud Messaging (FCM)**

DEMO

The background is a solid orange color. In the top right corner, there is a series of thin, white, wavy lines that flow from the top edge towards the right, creating a sense of movement. In the bottom left corner, there is a similar pattern of thin, white, wavy lines that flow from the bottom edge towards the left.
